

Quality Assurance Practices	
<p>Code Quality Is the solution the best? Are we following appropriate conventions?</p>	<p>Architecture Is the structure stable, extensible, maintainable?</p>
<p>Usability Does it make sense? Is it a pleasure to use?</p>	<p>Requirements Are we building the right thing?</p>
Other	

Ideally, practices should be explicit including who should do them and when.

Higher value QA practices catch issues more quickly. The best keep them from ever happening.
