

<b>Quality Assurance Practices</b>	
<p><b>Code Quality</b> Is the solution the best? Are we following appropriate conventions?</p>	<p><b>Architecture</b> Is the structure stable, extensible, maintainable?</p>
<p><b>Usability</b> Does it make sense? Is it a pleasure to use?</p>	<p><b>Requirements</b> Are we building the right thing?</p>
<b>Other</b>	

Ideally, practices should be explicit including who should do them and when.

Higher value QA practices catch issues more quickly. The best keep them from ever happening.
